

**Natural gas valve train**

**Product description for natural gas valve train**

The function of the fuel delivery system is to ensure the fuel required by the burner. To deliver fuel for the natural gas burner, we develop this system. Natural gas valve train provided by us mainly has filters, regulators, solenoid valve group, ignition solenoid valve group, fuel butterfly valve, and control systems.

In different pipelines, the oil and gas valves include: ball valves, gate valves, globe valves, check valves, filter valves etc. Valves required for different fuels in the pipelines are also different, such as: 1. Uses ball valves for pipes from inlet and outlet of softener to outlet of softener water tank; 2. Use gate valves of cast iron and cast steel to control the sewage outlet of the soft water tank and other pipelines; 3. The inlet and outlet of feed water dosing pump are controlled by swing check valve and y-type filter valve; 4. Uses copper ball valve for boiler water pump inlet;
